

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 24, 2021 - May 30, 2021

## HALLERTAU

**Comments:** This week the weather remained cool, so growth is still far behind the long-term average. The first farms have started the ploughing of the rows. Preventive measures against Peronospora primary infection and powdery mildew were recommended.

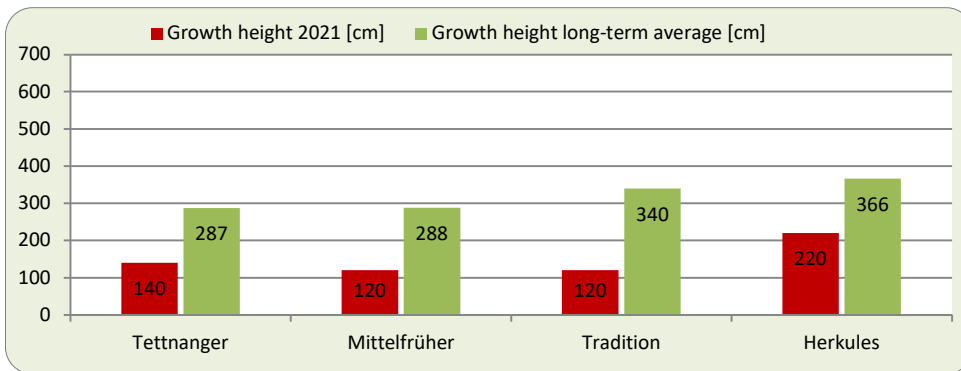

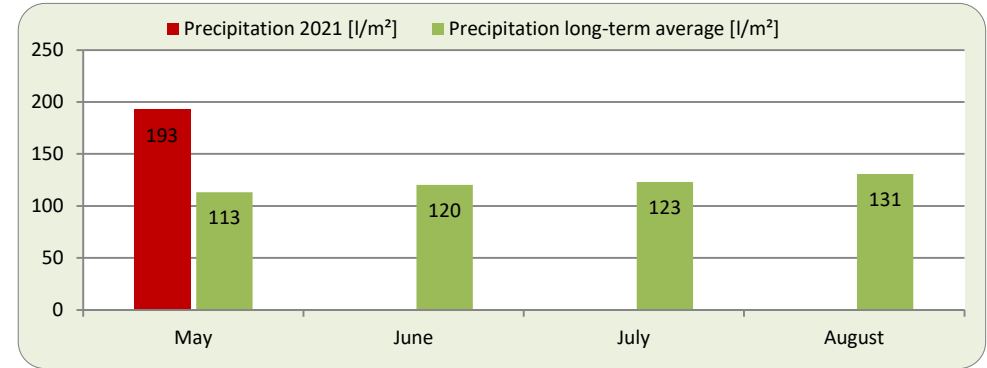

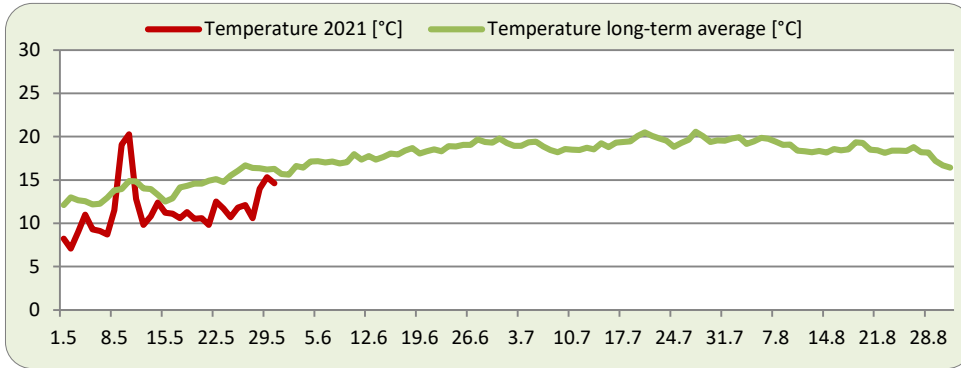

(Tendency: stable ↑, decreasing ←, increasing →)

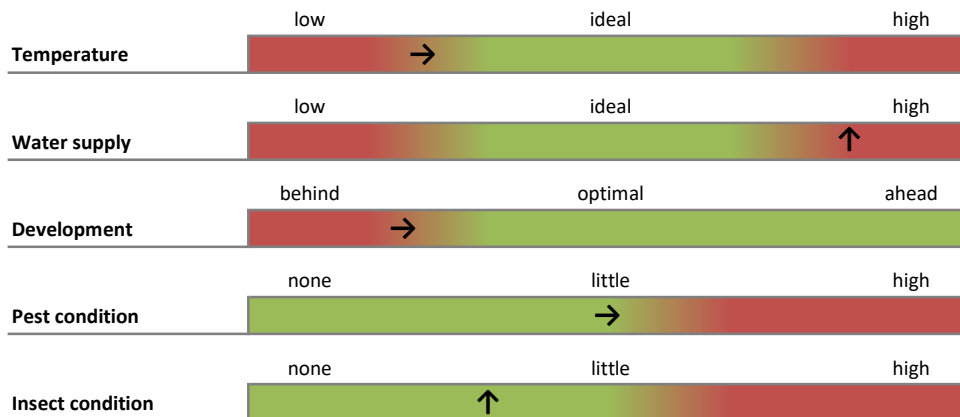

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 24, 2021 - May 30, 2021

## TETTNANG

**Comments:** The persistent cool temperatures continue to slow down the growth of the hops. By the end of the week, the soils were passable again and the ploughing of the rows could be started. In some cases, Peronospora primary infection was reported.

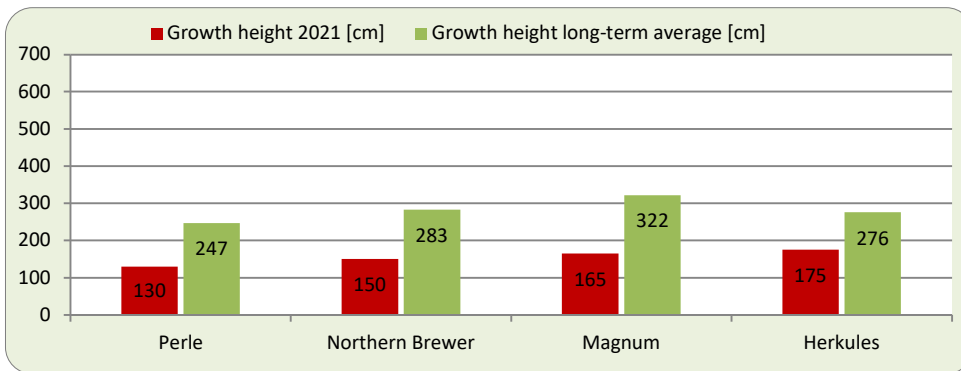

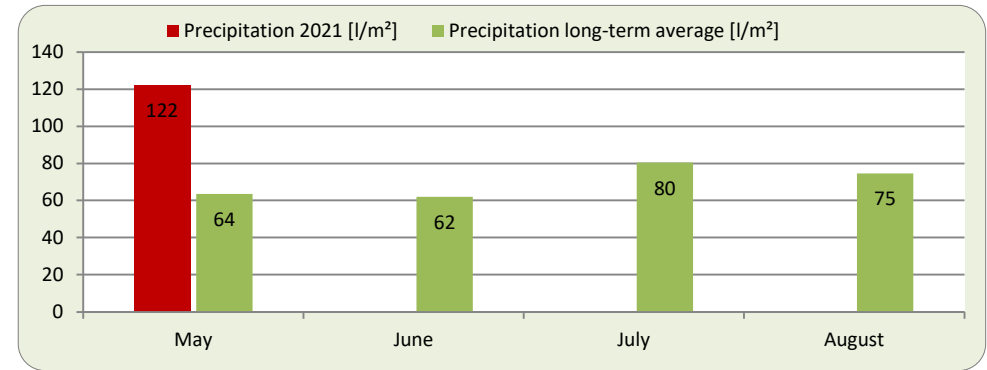

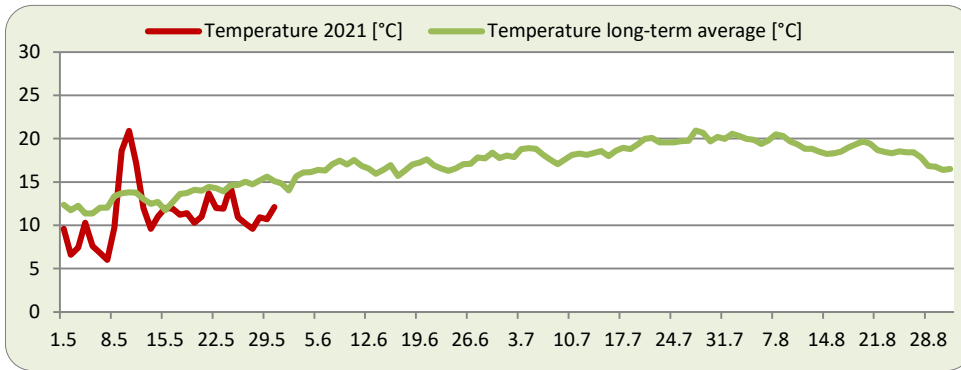

(Tendency: stable ↑, decreasing ←, increasing →)

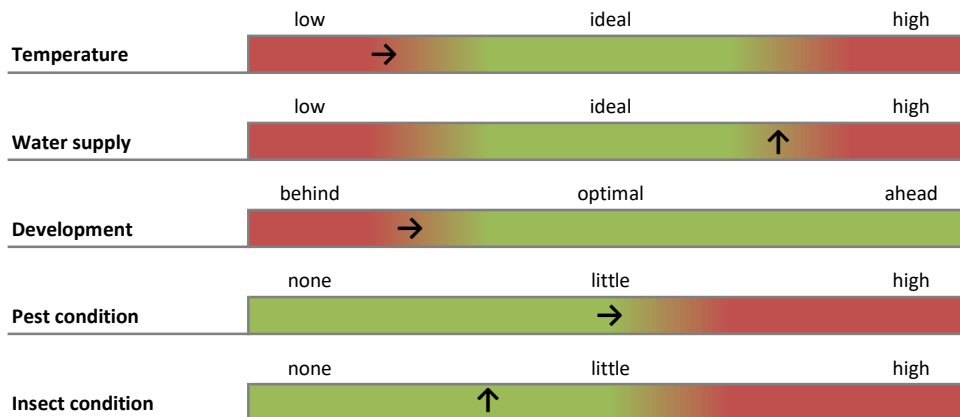

# Report on Weather and Hop Growing Conditions: Week 21

Report Period: May 24, 2021 - May 30, 2021

## ELBE SAALE

**Comments:** With no significant change in the cool and changeable weather this week, growth continues to be delayed. The farms are finished with the 1st training and have started the re-training. Control measures against Peronospora primary infection were carried out as symptoms were partially detected.
