

# WEATHER AND PLANT STATUS

HALLERTAU – Week 21 May, 20<sup>th</sup> – May, 26<sup>th</sup> 2024

Current situation			
Growth	behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	X high		

**Comments**

With cool night temperatures and moderate daytime temperatures, the growth in length increased differently, depending on the location. The soils are sufficiently supplied with water but are easy to drive on, so tillage, fertilization and plowing the rows can be carried out. The first spray applications against aphids, spider mites and mildew were carried out, depending on the infestation.

# WEATHER AND PLANT STATUS

TETTANANG – Week 21 May, 20<sup>th</sup> – May, 26<sup>th</sup> 2024

Current situation			
Growth	behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	X high		

**Comments**

The changeable weather, with sun, clouds and thunder showers at moderate temperatures, provided good growing conditions. Where accessibility of the ground was given, tillage was done, and the rows were plowed. Necessary sprayings against downy mildew were applied.

# WEATHER AND PLANT STATUS

ELBE SAALE – Week 21 May, 20<sup>th</sup> – May, 26<sup>th</sup> 2024

Current situation			
Growth	X behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	X low		optimal
	high		

**Comments**

Conditions varied in the Elbe-Saale region. While there was still little precipitation in some areas, some parts received heavy thunder showers. Farms are still busy with training. Otherwise, the soil was tilled, rows were plowed, and retraining work was carried out. Necessary sprayings against downy mildew were applied in very few cases.
