

WEATHER AND PLANT STATUS

HALLERTAU – Week 20 May, 13th – May, 19th 2024

Current situation			
Growth	behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	high		

Comments

The warm and rainy weather has allowed the hops to increase in length. The soils are currently well supplied with water. Most farms are busy working the soil and retraining the plants. Disease pressure remains low.

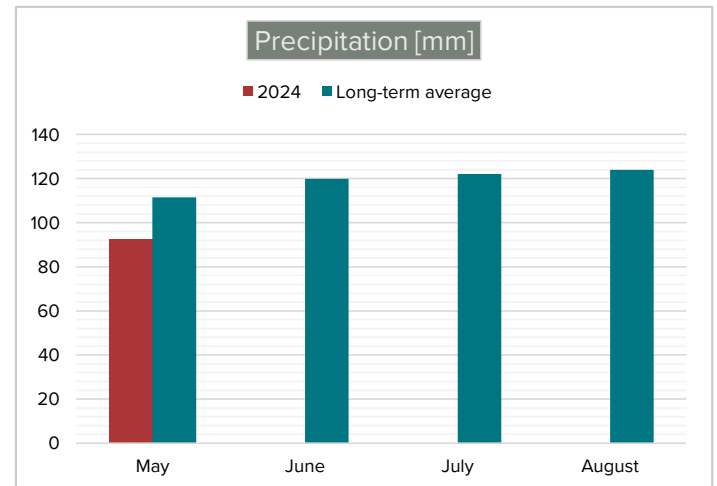

WEATHER AND PLANT STATUS

TETTANANG – Week 20 May, 13th – May, 19th 2024

Current situation			
Growth	behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	X high		

Comments

The warm and rainy weather was ideal for the growth of the hops. As far as the ground was passable, tillage and plowing of the rows was carried out. Treatments against downy mildew and the flea beetle were applied.

WEATHER AND PLANT STATUS

ELBE SAALE – Week 20 May, 13th – May, 19th 2024

Current situation			
Growth	X behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	X low		optimal
	high		

Comments

Weather conditions last week were mixed, with sunny weather at the beginning and cloudy and windy conditions later on. As there was no precipitation, the soil dried out considerably. There was also only a moderate growth in length. As a result, growth is lagging behind. Training is still underway, some fields have already been trained. Spraying against downy mildew was carried out.
