

WEATHER AND PLANT STATUS

HALLERTAU – Week 24 June, 10th– June, 16th 2024

Current situation			
Growth	behind		optimal
	X ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	X high		
Precipitation	low		optimal
	high		

Comments

Despite the relatively cool temperatures, many varieties are ahead in growth. The already pronounced side arm formation in many fields is striking. Disease and pest pressure remains high. Accordingly, the fields must be checked regularly and treated as necessary.

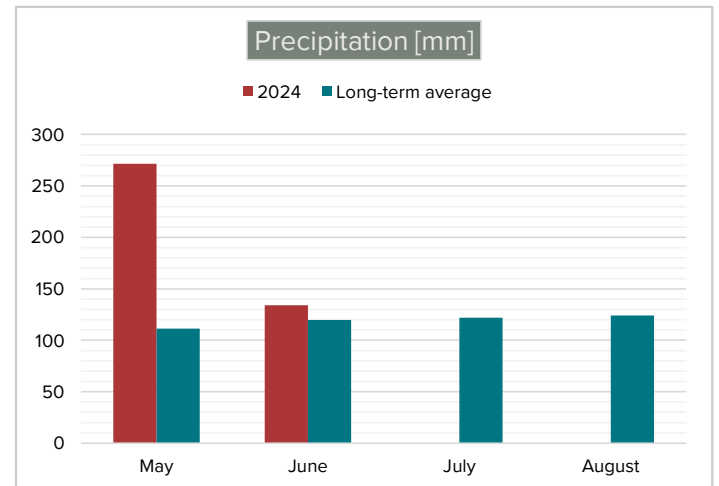

WEATHER AND PLANT STATUS

TETTNANG – Week 24 June, 10th – June, 16th 2024

Current situation			
Growth	X behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	X high		

Comments

The soils are still well saturated due to the rainy weather. Hallertauer Mittelfrüh and Tettnanger are still lagging behind in growth, while the other varieties are in the normal range. Due to the tense situation with fungal diseases and pests, plant protection measures continue to be carried out.

WEATHER AND PLANT STATUS

ELBE SAALE – Week 24 June, 10th – June, 16th 2024

Current situation			
Growth	behind		optimal
	ahead		
Disease pressure	high		low
Insect pressure	high		low
Weather trend upcoming week			
Temperature	low		optimal
	high		
Precipitation	low		optimal
	high		

Comments

Despite low daytime temperatures and cool nights, the crops were able to develop well. The soil is still sufficiently supplied with water although there was hardly any rain. Plant protection measures against downy mildew and spider mites were applied. Otherwise, farms were busy with tillage, the second ploughing of the rows and sowing cover crops.
